- Visual evoked potential 299
- Voluntary intake 203

## Instructions to Authors

1. Papers will be published in **English, French or German.**

2. Authors should submit **manuscripts together with two copies.** The original illustration material (original drawings etc.) and two copies should be submitted together with the manuscript.

3. The text should be as **clear and concise** as possible. Both form and content of the paper should be carefully checked to exclude the need for corrections in proof. A charge will be made for changes introduced after the manuscript has been set in type.

4. **Manuscripts** should be typewritten, double-spaced, on one side of letter size paper and with wider margin on the left. The author should mark in the margin where figures and tables may be inserted. All pages should be numbered consecutively. Tables, footnotes and legends for illustrations should be typed (double-spaced) on separate pages. Use the metric system for text and figures.

5. The **first page** should bear:

the title; the name(s) of the author(s); the name of the laboratory where the work was carried out; a running title of not more than 67 typewriter strokes; footnotes to the title (marked by asterisks).

6. Each paper should be preceded by a brief **abstract** in English concerned with the methods used and with the experimental results which should be presented in such a way that it is possible for the reader to assess their significance. It should be as short as possible and should **not exceed 200 words.**

French and German articles should also have an **English translation of the title.**

7. Immediately following the abstract, some relevant **key words** should be supplied for subject indexing.

8. Articles dealing with **original investigations** should first state the problem concisely and arrange the material under Methods, Results, Discussion, References.

9. **Footnotes** should be kept to a minimum and numbered consecutively throughout the paper. Footnotes referring to the heading of the article are to be marked by asterisks.

10. The **bibliography** should include only work cited in the text. References should be listed alphabetically at the end of the paper as follows: *journal papers*—names and initials of all authors, full title, journal abbreviated in accordance with World Medical Periodicals, volume number, first and last page numbers, year in parentheses; *books*—names of authors, full title, edition, place, publisher, year. *Examples:*

Latz, A., Bain, G. T., Kornetsky, C.: Attenuated effect of chlorpromazine on conditioned avoidance as a function of rapid acquisition. *Psychopharmacologia (Berl.)* **14**, 23—32 (1960).

Fisher, S., Cole, J. O., Rickels, K., Uhlenhuth, E. H.: Drug set interaction: The effect of expectation on drug response in outpatients. In: *Neuropsychopharmacology*. Bradley, P. B., Flugle, F., and Hoch, P., eds., vol. 3, pp. 149—156. Amsterdam: Elsevier 1964.

Several publications by the same author or group of authors should be listed in chronological order; those that appear in the same year should be distinguished by the suffixes a, b, c etc. Citations in the text should be given in parentheses, e.g. (Beckman, 1958; Brown, 1963), except when the author's name is part of a sentence, e.g. "Man (1966) reported that . . ." When a paper with more than two authors is cited, all authors are named the first time, but subsequently only the first author, e.g. (Miller *et al.*, 1963).

11. Figures should be separated from the text and numbered. They should be restricted to a minimum. Descriptions in captions should not be expanded in the text, nor should the same data be given in both graph and table form. Coloured or previously published illustrations are not usually accepted. Original drawings and graphs should be drawn in Indian ink with lines of uniform thickness. Where possible, **figures should be grouped**, bearing in mind maximum display area is 108 × 177 mm (4<sup>1</sup>/<sub>4</sub> × 7"). In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale—a capital letter should be about 1.8 mm high in the final version. If figures have to be redrawn for the block-maker, this may cause considerable delay in publication. Photographs should be sharp, well-contrasted glossy prints at right angles. Authors should mark them with Letraset (Instant Lettering).
